Subject: DHCP Server

One of our auditors told me it would be useful to have a DHCP server that could handle new devices without an issue (ie: new printers, servers, etc) I would like to have a DHCP server set up on our network - the current servers must maintain the current IP addresses, but assigned by the DHCP server dynamically.

In order to get points for this Inject, please provide us with screenshots or other documentation showing that DHCP has been successfully configured and is functioning.

Thank you.
