Subject: Proxy Server Installation

I want us to do a better job tracking web surfing and maybe optimize our use of bandwidth at the same time. Research and install a solution of your choice that can be implemented and documented in the time allotted. The chosen solution must be able to track and filter all outbound web traffic and generate a list of who is going where, what they're looking at, and how much time they're spending online. The solution you choose should also be able to cache popular web content so we're not constantly using all our bandwidth for web surfing. Please configure our clients to use this proxy server. Make sure all outbound Internet traffic goes through the proxy.

Once you get it implemented I'll need a quick summary report outlining what proxy solution you've chosen, why you chose it, and how you've implemented it in our environment.

Make sure to include a screen shot of the most hit sites. I need the report and supporting documentation uploaded in 90 minutes so please choose accordingly.

Thank you.
