Subject: Configure NTP

Team, we really need to have a consistent time on our network if we want our log files to be of any use. We can't have servers showing whatever time that they feel like.

Inject Instructions:

- 1) You are to set up one main clock on the network that every machine will be reconfigured to get the time from.
- 2) Please configure all devices, servers and workstations to get their time from this clock.

Provide screen shots in a memo to the IT Director demonstrating that the time is synced across all machines and devices, including the commands and/or utilities used to accomplish the tasks.

Thank you.

Director - Systems Engineering
