Subject: Computer Security Incident Response Procedures

Our management team is very concerned about the recent malicious activities that have been reported. Due to the high number of compromised systems they are expecting to have to defend our activities to auditors in the future. Could you please create a document that we can use in the short term for our computer security incident response procedures.

The computer security incident response procedures should include:

1. Steps to take if a system is identified as compromised
2. Steps to take to stop the malicious activity and block future activity from the malicious party
3. Any other considerations that may be relevant

Please provide this procedure in a PDF format.

Thanks

Thank you.

Director Information Security
