Subject: Disgruntled Employee

Team,

I just received the following note from our CISO:

On Saturday, I found it necessary to again discuss issues with Joe Smith regarding his responsibilities to the company and his use of company resources during normal business hours. I have had recurrent discussions with Joe regarding his job responsibilities and his inability to stay focused on his job. I have reminded Joe several times that he needs to take care of those individuals that are in need of his help in a timely manner. Joe has taken full advantage of the freedom his job provides him to the point that I no longer have confidence in his completing the tasks he is assigned. He has clearly placed his job in jeopardy. At this point I have placed Joe on notice that if he continues to disregard the requirements of his job we will have no choice but to terminate his employment.

At this point, knowing Joe has a role in our IT infrastructure, I am fearful that he will be somewhat disgruntled and may cause some issue in our IT services. It is my opinion that we need a way to track all employee system access and what they do on our systems. If I may suggest we look into an endpoint security system.

To meet her request please provide a report with the following:
1. Determine the best solution for tracking user activity throughout our network.
2. Document an approach and upload a summary report outlining the approach. Please be specific on how you would implement it in our environment.

3. Please provide an estimate of time it would take to set this up. Estimate should be in number of minutes.

This summary report should be no longer than 3 pages

Thank you.

Director - Information Security
